# CORROCEM<sup>TM</sup> SILICA FUME ADMIXTURES

## CORROCEM COMPACTED SILICA FUME NOW AVAILABLE IN DRY BULK FORM

Norcem Concrete Products is the exclusive manufacturer and supplier of bulk dry compacted silica fume in the United States. CORROCEM compacted silica fume has all of the same technical performance criteria as ordinary silica fume, but at over twice the density (35 to 40 lbs./ft.<sup>3</sup>), with material handling qualities superior to that of bulk cement. CORROCEM silica fume additives are a family of pozzolanic admixtures which combine with the lime in fresh concrete to produce a new binder matrix which is chemically resistant and has a denser microscopic pore structure.

For ready mix applications CORROCEM compacted silica fume can give you quality corrosion resistant concrete for parking decks, high strength projects, bridges and marine structures. All of this can be accomplished from normal automated cement batching systems.

For precast applications CORROCEM compacted silica fume can provide high early and high ultimate compressive strengths. CORROCEM compacted silica fume can also significantly reduce steam curing times, and provide substantial savings on heating costs and rapid turnover of forms.

For shotcrete applications, wet or dry, CORROCEM compacted silica fume can provide high strength, with significantly less rebound loss allowing thicker applications.

The addition of CORROCEM silica fume admixtures will produce concrete with superior performance for the following characteristics:

- Extremely low permeability to chloride ion intrusion, prevents rebar corrosion.
- High ultimate compressive strengths, 8000-17000 psi, with variable dosages of silica fume.
- High early strengths (without steam curing): 4500 psi in 24 hours, 6000 psi at 3 days, (with steam curing these strengths can be increased 50 to 100%).
- Resistance to chemical attack from: chlorides, nitrates, acids and sulfates.
- Increased abrasion resistance and durability.
- Increased freeze/thaw durability.

The use of CORROCEM compacted silica fume completely stops rebar corrosion, protecting any type of embedded steel. This is because CORROCEM compacted silica fume concrete has low chloride permeability and extremely high electrical resistivity which does not allow corrosion current (measured by Rapid Chloride Permeability Tests) to flow between the embedded steel members. Concrete utilizing CORROCEM compacted silica fume has achieved Rapid Chloride Permeability of 190 coulombs for field cylinder samples (1% CORROCEM by weight of cement). This is superior technical performance compared to silica fume water slurries, due to the elimination of particle size agglomeration in water.

Compacted silica fume is virtually dustless, flows readily (better than bulk cement) and can be stored in ordinary cement silos and transported in bulk cement tankers. It can be moved into cement storage silos by: pneumatic lines, bucket elevator or screw conveyor.

CORROCEM compacted silica fume can be shipped via standard cement tankers that hold 23 to 25 tons or "Super Sacks", large 70 cubic foot polypropylene bags which can hold approximately one ton of compacted silica fume. The double density allows bulk handling methods and also helps to reduce shipping costs as compared to ordinary silica fume and silica fume water slurries. CORROCEM silica fume admixtures are also available in 55 pound bags for smaller projects and field use.

Norcem will provide technical assistance with mix designs, field support and material handling systems. Norcem can also supply a compatible line of superplasticizers which make the plant and field use of silica fume concrete simple and practical.

The addition of CORROCEM compacted silica fume will allow you to produce concrete products stronger and more durable, with many performance characteristics which are normally unattainable.

# pave up... Miller Formless Quality

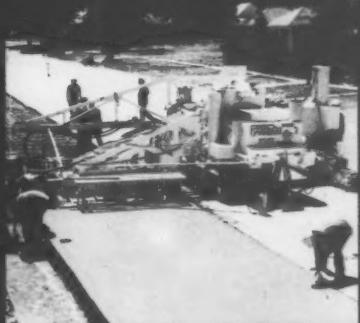

Above — M-9000 Multi Directional Paver, heavyweight performance — paving widths 8 feet to 18 feet, optional 27 feet.

Right — The M-8100 is a bi-directional sidemount paver and mid-sized half-width paving system. In the sidemount mode the M-8100 slipforms curb & gutter, sidewalk, 60" barrier wall, bridge parapet and 12' sidemount paving applications. The M-8100 can be used as a right or left hand sidemount to go with traffic flow. As a half-width slipform paver the M-8100 can slipform 16 foot paving applications with integral curb.

Above — The M-1000 Curb & Gutter Machine, high productivity combined with set up ease best describes this fully automated system when slipforming curb & gutter and sidewalk applications.

# PICK YOUR FINISH

## Before You Pour

Select the quality of surface finish you want before you pour...with Crete-Lease release agents.

### Crete-Lease 880™

For example, if you want a Class 1 unblemished concrete surface, spray your forms and form liners with an ultra-thin film of Crete-Lease 880 before placing the concrete.

You'll get a high visual impact finish. Produces smoother, more beautiful architectural surfaces every time. Bugholes minimized or eliminated...works especially well with superplasticized concrete. Easy stripping, clean forms and high coverage. Won't stain. Won't cause paint to peel nor caulking to leak. Other Crete-Lease formulas available to give you the quality of surface finish you want.

### FREE BROCHURE

#### "How to Eliminate Bugholes"

A photographic guide to picture-perfect concrete. Illustrates six classes of concrete appearances. Gives you visual specifications to consistently produce the finished concrete you want. Call or write:

# TEST THE BEST

Magna invites you to try the finest lines of hammer drill accessories available anywhere.

Hammer bits with shanks of annealed steel. Shot-peened for torque and twist protection. Fluted, for faster drilling and better dust extraction. And tipped with top grade tungsten carbide. To make piercing concrete and stone easy.

Hammer core and hollow core bits for drilling wide diameter holes in virtually any masonry material. Precision crafted tools with perfectly placed, clean-cutting carbide tips. To give you better finished work and longer service.

Masonry chisels and steel points. For scaling, for chipping, for roughing, for channeling, and for more. All made of high-grade, drop-forged steel with hardened work areas that make your work easy.

And Magna's new BX5. With five cutting edges of tough H-L grade carbide and a double spiral twist design, for fast dust disposal. A bit that centers precisely. That cuts down on drill-sound. That cuts down on vibration. That cuts perfect circles in masonry.

Try Magna hammer drill accessories. Test the best. You'll like how they bring out your best.

# MAKE EVERY BREAK COUNT

Brainard-Kilman's C-140 Concrete Compression Machine makes all your cylinder breaks count. The C-140, featuring MAX™ electronics, virtually eliminates the chance for human error by fully documenting test results. Sample number, date, time and correct load pacing are all recorded and printed.

Standard features include:

- 440,000 lb capacity
- Console, waist high platens & fragment guards
- Heavy duty steel frame
- Bottom load application for precise applied load measurement

Meets ASTM C 39, E 4,  
AASHTO T 22

**MAX™ Electronic System** includes:

- Digital Readout & Printer
- Unique "Peak Hold"
- 10,000 psi Pressure Transducer

- Digital Load Pacing to help control load rate
- RS232 computer output
- Easy-to-use push button controls

# David White Instruments. *Nobody else has it all.*

David White  
Instruments

*Nobody helps you  
build better.  
Automatically.*

**Nobody but David White** offers you a full line of precision-built laser and optical instruments. And there's never been a better time to buy one of these precision productivity tools.

**Think of them as a full line of money machines.**

The time you save with a David White automatic instrument is money in the bank. Automatic level compensation lets you level faster. More accurately. Without a lot of finicky adjustments. Precision compensators automatically establish a level line of sight, then hold it accurately, even in areas of on-the-job vibration.

The David White automatics are loaded with easy-to-use, time-saving features. Optical or laser, they're just like extra hands on the job.

circle 413 on reader service card

## FREE Tripod

with the purchase of any automatic  
optical or laser instrument  
before May 31, 1989.

**We'll even sweeten the deal with a FREE tripod.**

Buy a David White optical or laser automatic level by May 31, 1989, and we'll include a rugged, reliable David White extension-leg tripod at no additional cost. Purchase validation required. See your David White dealer for details.

The free tripod is a limited-time offer. But when you go with David White, the extra productivity is always free. Automatically.

Write David White or return the publication inquiry card for more information, a FREE Tripod certificate, and a FREE Keep On Buildin' America bumper sticker.

## "You're not going to outproduce these machines. Period."

-Mike Vallencourt

When Mike Vallencourt bids on projects, he has an edge...the Puckett Bros. edge. The president of Vallencourt Construction says it flat out: "Ever since I bought a Puckett Bros. 510D Grader and SF820D Slipform Concrete Curber, I've been able to expand operations."

"The SF820D Curber had given us a completely new source of revenue. Before we paved a parking lot, we had to sub out the curb work to other contractors. That gave us headaches in both profitability and scheduling. Not any more. These two machines allow us to compete in terms of price and production with anyone. With our curber we can put out as much lineal feet of curb as any larger more expensive curber...with less manual work. This means we can get in, get the job done and move on to the next one while the competition is still finishing up massive hand work."

"The 510D Grader and SF820D Curber work together as a team. Their versatility allows us to tackle all kinds of jobs — from 60,000 lineal feet of subdivision curb to 78,000 square feet of concrete golf cart paths."

A 10-foot moldboard, rear-mount rippers and front-end loader are standard features on the economical, multipurpose 510D PB Grader. With the optional vibratory plate compactor, the 510D can handle total site preparation. And Mike Vallencourt points out, "We can both grade and compact subgrade with it. And the stringline sensors let us prepare the total surface on-grade."

The maneuverable SF820D Slipform Concrete Curber boasts features you would only expect on larger curbers. With a 22 inch vertical lift and a unique conveyor design the SF820D

can get you close to obstacles and work in tight areas. And slipforming a radius of 2½ feet is a snap! A small crew can deliver high-quality curb in mass quantities."

# WE GIVE YOU A SUPER CHOICE.

world of '89  
concrete USA  
Booth 4055

Until now, if you wanted a superplasticizer you had to buy the one your admixture supplier happened to sell.

But what if you wanted a naphthalene-based super but your supplier sold only a melamine-based super? Or the other way around?

You were stuck. But now all that's changed.

Gifford-Hill offers you the best choice in supers: Naphthalene-based PSI® Super or Melamine-based Melment.®

And equally important, we have the technical expertise to guide you in choosing the best one for your particular applications.

For more information on admixtures, non-shrink grouts, sealers or hardeners, just contact your Gifford-Hill Representative, or call our Headquarters at 214/754-5500.

We give you a super choice.  
And super service, too.

## Mayco LST Series of Mid-Range Concrete Pumps

QUALITY AND RELIABILITY  
DON'T HAVE TO COST MORE  
SENSIBLY PRICED—LST 60S

- A long-stroke concrete pump designed to place concrete mixes containing 1½" aggregate
- Volume outputs ranging from 0 up to 60+ cubic yards per hour
- Versatile—pumps ½" minus pea gravel mixes
- Only two wearing parts in concrete valve—a wear ring and wear plate
- Long hose jobs . . . tougher mixes . . . higher volume than a larger hydraulic pump offers with pressure capabilities in excess of 900 psi

Featuring MAYCO's exclusive Balanced Hydraulics™

In addition to placing concrete for slabs and decks, this versatile pump handles many applications including shotcreting, masonry block fill, sand backfill, chemical and organic slurries, oil field drilling cuttings and compaction grouting.

# Bonsal Just Removed Another Barrier To Saving Money.

## WET CONCRETE

world of '89  
concrete™ USA  
Booth 3065

### Announcing A Revolutionary Self-Leveling Wear Topping From Bonsal.

The wear-surfaced product so advanced, it can be opened to light traffic just four hours after application. Because, it's the first true wear-surfaced floor topping for both exterior and interior use that needs no additional finishing. No overcoating sealers or protective coatings of any kind.

So, you can imagine how much money you can save in labor costs and down time. Not to mention materials. You simply apply by pump or pour.

For new construction, you eliminate the cost of finishing work prior to tile or other flooring. On the other hand, you can also slash your down time for renovation and repair projects.

Need proof? We're ready with complete details on successful and proven applications, from residential construction to parking decks. Call or write W. R. Bonsal Company, P.O. Box 241148, Charlotte, NC 28224. 1-800-334-0784. In North Carolina (704) 525-1621.

## Gyp-Crete 2000™ Floor Underlayment

## Because Not All Concrete Floors Are Created Level.

Maybe the concrete curled or the form work sagged. Or maybe the surface just wasn't smooth enough to accept a finished floor good.

To anyone who works with concrete, the problem of a rough, uneven, out-of-level floor is all too familiar.

Luckily, there's a solution.

Gyp-Crete 2000 pours over concrete and corrects a multitude of sins. It smooths rough spots without dusty grinding. It dries without shrinkage cracks, accepting foot traffic within 90 minutes of application. And at depths of  $\frac{1}{8}$  inch to 3 inches, Gyp-Crete 2000 can create a smooth, flat floor without time-consuming hand troweling.

Best of all, a Gyp-Crete 2000 crew can apply up to 30,000 square feet per day at a fraction of the cost of other cementitious underlays.

### For more information, contact:

# STEP INTO THE ELECTRONIC AGE. AFFORDABLY.

Now work faster, work smarter...with the industry's finest value in electronic surveying instruments—the DT5A and DT5 by Lietz. These easy-to-use digital transits make quick work of foundation staking, lot and loan surveys—their quality and convenience can help make your business more profitable.

- Large, liquid crystal displays are easy to read in bright sun, backlit for low light
- Digital angle display for superior accuracy
- Time-saving optical plummet
- Superior optics with 30X telescope
- Lightweight durability

#### LIETZ DT5A:

Features two-line LCD display and soft-touch function keys. Perfect for the contractor or construction layout. Perfect back-up for the part-time crew.

Don't wait any longer to give yourself the electronic advantage—call today for full details and a personal demonstration.

#### LIETZ DT5:

Features dual, two-line LCD displays and soft-touch function keys on both front and back of instrument. Versatile and fast.

**The Valve  
Is the Difference...**

**It's Not a Swing Tube  
It's Not a Rock Valve  
It's Olin's All-New, Patented  
One-Piece "Slide-Valve"**

Five Models with Outputs from 40 to 140 Cubic Yards Per Hour

- Smooth Delivery
- Able to Pump Mixes Containing High Fines, Without High Wear
- Able to Pump Mixes Containing Up to 1 1/2" Aggregate

The smooth delivery of even harsh, low slump concrete is a direct result of the efficiency of the patented one piece "slide-valve" and is achieved without complicated closed loop hydraulic systems.

You get these and many other features, along with Olin's exclusive 3-year/3000 hour limited warranty.

Seeing is believing. Call or write the factory for a free video. Performance, not promises...that's Olinpump

**CLARK**

**Portable™  
Concrete Conveyor**

**The lightweight solution  
to your heavyweight problems.**

**CONSIDER THE ADVANTAGES:**

\***Low Price**—All models sell for under \$5,000.00.

\***Simple to Operate**—One control varies belt speed to accommodate high or low slump concrete.

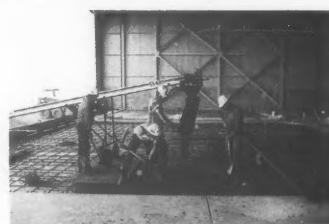

\***Lightweight**—All models are constructed of high strength aluminum alloys.

\***Low Operation Costs**—Our patented design dramatically reduces moving parts.

\***High Productivity**—Up to 50 cubic yards per hour can be expected.

\***Easy To Transport**—All models can be transported on a 12 foot pickup ladder rack.

\***Versatility**—With 15 models to choose from and lengths up to 30 feet the need for costly pumps, cranes and large conveyors is greatly reduced.

## Sinco's New Air Powered Dry Cutting Concrete Saws have a life expectancy measured in years, not hours!

### Sinco's New Air Powered Saws Last More than 4 Times Longer Than Conventional Gasoline Saws

Sinco's new Air Powered Concrete Cutting Saws - the Hand-Held HS-25 and the Walk-Behind P-60 - represent the latest development in concrete cutting technology. These new saws are specifically designed and built for dry cutting. The Sinco HS-25 and P-60 develop the necessary high RPM's for fast dry blade cutting and will significantly increase the life of a dry diamond blade.

### High Performance and Low Maintenance Costs

The Sinco HS-25 and P-60 are air powered. All you have to do is attach the saw to a compressor air hose and keep the automatic oiler filled. The oiler is provided as standard equipment. There is no gas line or carburetor to get clogged, no air filter to clean, no spark plug to foul, no pistons to get gummed up by dust and debris. And believe it or not, there's minimal required maintenance.

The Sinco Hand-Held HS-25 and Walk-Behind P-60 Air Powered Saws have a life expectancy that really can be measured in years, not hours.

For more information, contact:

### Compare Benefits

#### The HS-25 Hand-Held Air Powered Saw

- Cuts Dry - specifically designed for dry blades
- Direct Drive - for maximum power, no belts, pulleys or chains to drain horsepower or break
- Use Indoors or Out - no engine exhaust or pollutants
- 4 HP Air Motor - powerful state-of-the-art technology and virtually maintenance free
- 4800 RPM Working Speed - the best RPM's for dry cutting blades - increases blade life and speed of cut
- Lightweight - only 22 lbs. plus blade
- Dead Man Type Hand Throttle - safe and reliable
- Minimal Maintenance Schedule - economical operation and long life

**world of '89  
concrete USA**

Booth 769

#### The P-60 Walk-Behind Air Saw

- Cuts Dry - specifically designed for dry blades
- Direct Drive - for maximum power, no belts, pulleys or chains to drain horsepower or break
- 3.6 HP Air Motor - powerful state-of-the-art technology and virtually maintenance free
- 4800 RPM Working Speed - the best RPM's for dry cutting blades - increases blade life and speed of cut
- Lightweight - only 50 lbs. plus blade
- Dead Man Type Hand Throttle - safe and reliable
- Adjustable Cutting Depth - up to 4" with a 14" blade
- Dust Suppressor - an atomizer sprays water - keeps dust to a minimum
- Handle Rotates 90° - allows cuts within 1" of wall
- Detachable Handle - easy to transport, saw fits in car trunk
- Minimal Maintenance Schedule - economical operation and long life

*Sinco brings concrete cutting technology into the 21st century.*

## Mix and pump a bag-a-minute! One man continuous-batching of non-shrink & sanded grouts.

**System Advantages.**

- ... mixes and pumps non-shrink, sanded grouts, cement or sand/cement
- ... superior mixer is designed for fast, thorough mixing
- ... mixer speed and efficiency enable the 34 gallon (4 bag) mixer-tank, hopper and pump to work as a "balanced system" — mixing stays ahead of pump output
- ... one operator performs all mixing and pumping, saving the cost of two or three laborers
- ... cleans up with a water flush

**The Pump.**

- ... positive displacement air-powered piston pump
- ... delivers one bag per minute (5 gpm) under pressures to 225 psi
- ... three wetted working parts and quick disconnect couplings offer easy maintenance/servicing without tools

**Field-Proven Applications.** Use the CG-550P to grout machine bases... precast units... in post tensioning... hollow doors/windows

... concrete patch dowels ... voids ... for water-proofing ... and much more.

**Quick Delivery.**

# Meet the Cushion Cut family of Groovers and Grinders

NO OTHER COMPANY GIVES YOU A CHOICE LIKE THIS

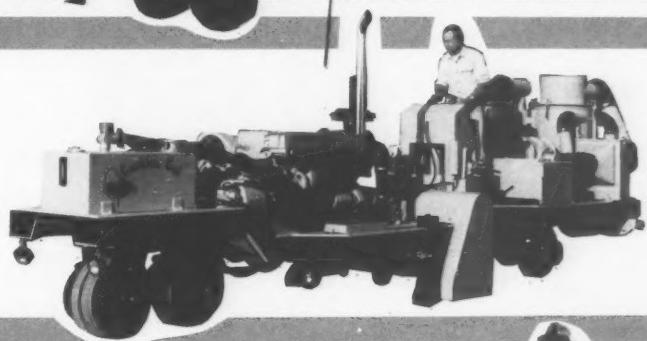

**PC-5000  
Highway Grinder**

The high performance PC-5000 allows large production highway grinding with an excellent profile. Carries its own on-board water supply. This 40 foot unit requires only a single operator. Carried to the job-site like a semi-trailer, it sets up in less than 15 minutes.

**PC-390  
Groover/Grinder**

The new 14 foot PC-390 is designed for high production pavement grooving, continuous highway grinding, and bump grinding. This rugged unit incorporates some of the latest features to make the work move smoothly and efficiently.

**HG-130A Groover/Grinder**

Versatile and compact, the eight foot long HG-130A can be used for intermediate duty grooving, grinding, and bridge deck transverse grooving applications. It's a highly mobile unit capable of turning around in its own length.

**HP-6530 Pavement Groover**

This compact, heavy duty pavement groover is ideally suited for bridge deck grooving and similar applications. Powered by a 65 horsepower Wisconsin Engine, it will groove up to a 30 inch width.

# WATERPROOF.

**AquataPoxy™ solves wet and dry coating  
and patching problems**

world of '89  
concrete USA  
Booth 3102

AquataPoxy™ coatings and patching gels are so remarkable they can actually be applied directly *underwater*. Leaks can be repaired while water containment structures are in service. Downtime is dramatically reduced.

AquataPoxy chemically displaces water on submerged surfaces to create a tight bond that dries hard, durable, and waterproof. AquataPoxy is non-polluting, non-toxic and USDA and EPA accepted. It resists common acids, bases, solvents, & oils.

AquataPoxy. At work today in:

clarifiers, salt and fresh water vessels, potable water tanks, canal linings and breakwaters, pipelines, offshore drilling rigs, waste-water treatment plants...around the corner and around the world. AquataPoxy helps solve your difficult coating and patching problems. Waterproof. Water proven. Call or write today for free literature.

8800-square-foot warehouse floor leveled with ARDEX K-500 at ½ inch depth in one morning.

## New floor in one morning— flat!

world of '89  
concrete USA

Booth 4455

Minimize downtime with ARDEX K-500 self-leveling, pumpable concrete topping!

ARDEX K-500 Self-Leveling Concrete Topping can be easily installed manually with a three-man crew, or pumped on large jobs with the ARDEX Levelcraft Automatic Mixing Pump. Just pour or pump and spread ARDEX K-500 from ¼ inch to 1½ inches in one application.

No troweling required! ARDEX K-500 levels itself automatically...can be walked on in 3 hours, coated in 24 hours, and driven over in 48 hours!

ARDEX K-500 has a compressive strength of 5300 psi. It is ideal for warehouses, garages, and utility areas—for new construction or renovation, on or below grade. For technical data and local availability, contact ARDEX, INC., 630 Stoops Ferry Road, Coraopolis (Pittsburgh), PA 15120; phone (412) 264-4240.

# Everything Concrete

See Us At WOC Booth 4668

## Elba Parts

PCEC, Parsons Concrete Equipment Company, is your exclusive supplier of genuine Elba parts. Elba parts are durable, precision-made and built for the long haul. And we have parts for all models in stock. Call about our monthly specials.

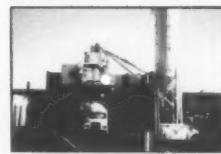

PCEC is also bringing you the Hornet line of Trizter-Mounted Concrete Pumps. They're 30-90 cu. yd./hr. mid-dleweight pumps with a heavy-weight punch.

What's more, PCEC is your

PCEC Staff

single source for sensational Elba Batch Plants. Whether you use Elba Batch Plants for concrete products, ready-mix operation, or on-site, the economic advantages can be terrific.

## Concrete Plants

In addition, PCEC is the U.S. supplier of SBS Gunite Machinery. This equipment represents the greatest advancement in dry shotcreting in the past 25 years.

## SBS Concrete Spray Systems

PCEC, Box 241146, Charlotte, NC 28224, Fax: 704/523-7922

## Hornet Concrete Pump

It produces high-strength concrete in place with minimum rebound waste and maximum dust control.

To find out more about PCEC products and the service that backs them up, just call us at 704/527-3481.

PCEC. Your source for concrete solutions.
